Détails des optimisations et interventions effectuées

1 – Optimisation des images

Le projet contenait 14 images pour un poids total de 29,38 MB. Les optimisations suivantes ont été appliquées :

Conversion des images de .jpg à .webp.

Redimensionnement et compression, réduisant le poids total à 0,48 MB (gain de 98,37 %).

2 – Chargement différé

Initialement, les scripts se chargeaient au démarrage du site, ralentissant l'affichage.

Ajout de l'attribut defer aux balises script pour permettre un chargement en arrière-plan, sans bloquer le rendu de la page.

3 – Minification des fichiers

Les fichiers CSS et JS ont été allégés pour améliorer la vitesse de chargement :

bootstrap.css : 200 Ko \rightarrow 159 Ko (-20,5 %).

bootstrap.bundle.js : 205 Ko \rightarrow 130 Ko (-36,59 %).

style.css : 4,96 Ko \rightarrow 3,83 Ko (-22,78 %).

maugallery.js : 8,37 Ko \rightarrow 6,25 Ko (-25,33 %).

4 – Amélioration de la structure HTML

La structure HTML initiale manquait d'optimisation pour le référencement :

Ajout des balises title, meta description et structuration des titres.

Ajout des balises header, nav, main et footer pour une meilleure hiérarchie du contenu.

Ajout d'un attribut alt à chaque image pour améliorer l'accessibilité et le SEO.

5 – Référencement local

Le site manquait de visibilité dans les recherches locales.

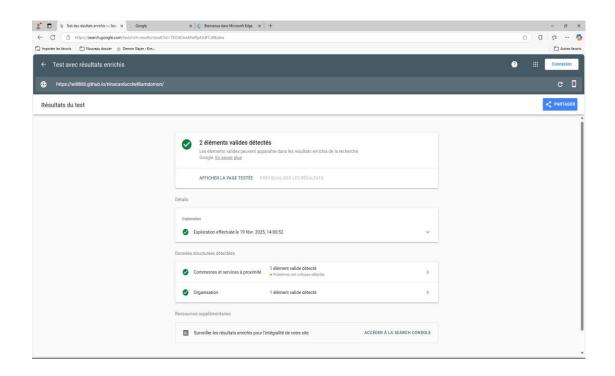

Ajout de micro-données Schema.org contenant les informations de l'entreprise pour optimiser le référencement local.

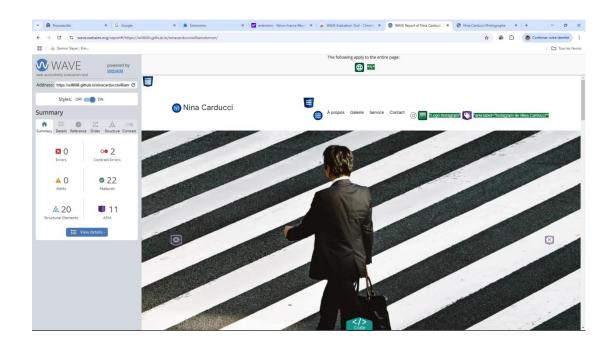

Capture d'écran du rapport de Rich Snippet Google montrant l'amélioration de l'affichage des résultats.

6 – Optimisation pour les réseaux sociaux

Pour améliorer l'apparence des liens partagés sur Facebook et Twitter :

Ajout des balises Open Graph et Twitter Card pour définir le titre, l'image, la description et l'URL du site.

DIAGNOSTICS

about:blank

19/02/2025 14:05 about:blank

A	Eliminate render-blocking resources — Potential savings of 130 ms	~		
	Image elements do not have explicit width and height	~		
	Serve static assets with an efficient cache policy — 20 resources found	~		
	Properly size images — Potential savings of 135 KiB	~		
	Avoid serving legacy JavaScript to modern browsers — Potential savings of 9 KiB	~		
	Reduce unused JavaScript — Potential savings of 123 KiB	~		
0	Avoid large layout shifts — 2 layout shifts found	~		
0	Initial server response time was short — Root document took 10 ms	~		
0	Avoids enormous network payloads — Total size was 661 KiB	~		
0	Avoids an excessive DOM size — 151 elements	~		
0	Avoid chaining critical requests — 7 chains found	~		
0	JavaScript execution time — 0.1 s	~		
0	Minimizes main-thread work — 0.2 s	~		
0	Minimize third-party usage — Third-party code blocked the main thread for 0 ms	~		
0	Largest Contentful Paint element — 700 ms	~		
0	Avoid long main-thread tasks — 1 long task found	~
